

Task 3.11 Direct Support

Task Overview

Occasionally, FSA staff and contractors need direct security support including specialized training, security control testing, network scanning, preparation of security documentation, independent analysis, and so on. BearingPoint has reserved a predetermined allotment of hours for this task area. We will coordinate this support directly with the security and privacy champion and track the number of hours spent each month on this task area. We will begin giving direct C&A support to one or more FSA systems during the next 2-month period.
